

Loch Senior Front End Developer Take Home Assessment

Task:

Your task is to convert Figma designs into a fully functioning responsive front end webpage.

[This Figma](#) contains designs for a landing page for Loch. The user is presented with this page after they click on a social media "sign up" advertisement.

1. The testimonials at the bottom should move when clicked and dragged.
2. The notification settings on the top of the page should auto-rotate on an infinite carousel.
3. The textbox on the right should be responsive on hover and click.
4. Check if the email added is a legitimate email or not. I.e. does it contain "@" and "." Otherwise spit out a "Please enter a valid email" message.
5. When the user submits their email, they should be redirected to <https://app.loch.one/welcome>.
6. The webpage should be autofitted and compatible with all screen sizes and browsers.
7. You must use react to build the application.

Evaluation criteria:

1. Your ability to convert the Figma to a website as closely as possible.
2. Your attention to detail. We literally use a magnifying glass to check if all pixels match.
3. The quality and simplicity of your code.

Deliverables:

1. Hosted link to the working website
2. Github repo for the code used
